April 2026

PropVest — Design System & UI Specification

The visual identity and component library for every PropVest platform. Designed to feel premium, trustworthy, and effortlessly modern — like the app was designed by a world-class team.

DESIGN PHILOSOPHY

One sentence: PropVest should feel like a luxury bank built by a Silicon Valley startup.

Three pillars:

1. **Trust** — People are putting their money here. Every pixel must say "your money is safe." No gimmicks, no clutter, no cheap gradients. Clean, confident, professional.
2. **Simplicity** — A teacher in Kano and a developer in Abuja both use this app. If someone's grandmother can't figure it out, it's too complicated. Every screen should have ONE clear action.
3. **Premium** — This is not PiggyVest. This is not a savings app. This is real estate. It should feel like walking into a high-end property showroom — spacious, elegant, intentional.

Design inspirations:

- Mercury (banking) — clean, dark mode, spacious
 - Linear (product) — micro-animations, attention to detail
 - Revolut (fintech) — card-based, smooth transitions
 - Stripe (payments) — gradient accents, professional
 - Apple (everything) — whitespace is a feature, not a waste
-

COLOR PALETTE

Brand Colors

Primary:	#0A2540	"Midnight"	– Deep navy. Headers, primary text, nav backgrounds. Inspired by Stripe's signature dark blue. Says: "We are serious about your money."
Accent:	#00D4AA	"Emerald"	– Vibrant teal-green. CTAs, success states, growth indicators, money-related highlights. Says: "Your money is growing."
Accent Alt:	#635BFF	"Royal"	– Rich purple-blue. Secondary CTAs, links, interactive elements, charts. Says: "Premium. Modern. Tech-forward."

Light Theme

Background:			
bg-primary:	#FFFFFF		– Main background (pure white)
bg-secondary:	#F8FAFC		– Section backgrounds, alternating rows
bg-tertiary:	#F1F5F9		– Card backgrounds, input backgrounds
bg-elevated:	#FFFFFF		– Elevated cards (with shadow)
Text:			
text-primary:	#0A2540		– Headings, primary content
text-secondary:	#425466		– Body text, descriptions
text-tertiary:	#8898A9		– Captions, timestamps, placeholders
text-inverse:	#FFFFFF		– Text on dark/accent backgrounds
Borders:			
border-default:	#E2E8F0		– Card borders, dividers
border-subtle:	#F1F5F9		– Subtle separators
border-focus:	#00D4AA		– Input focus ring
Status:			
success:	#00D4AA		– Payout received, KYC approved
success-bg:	#ECFDF5		– Success background
warning:	#F59E0B		– Pending, attention needed
warning-bg:	#FFFBEF		– Warning background
error:	#EF4444		– Failed, rejected
error-bg:	#FEE2E2		– Error background
info:	#635BFF		– Information, tips
info-bg:	#EEF2FF		– Info background

Dark Theme

Background:			
bg-primary:	#0A0E14		– Main background (near black, NOT pure black)
bg-secondary:	#111827		– Section backgrounds
bg-tertiary:	#1F2937		– Card backgrounds
bg-elevated:	#1A2332		– Elevated cards (with subtle glow)
Text:			

text-primary: #F9FAFB	– Headings, primary content
text-secondary: #9CA3AF	– Body text
text-tertiary: #6B7280	– Captions, timestamps
text-inverse: #0A2540	– Text on light backgrounds

Borders:

border-default: #1F2937	– Card borders
border-subtle: #374151	– Subtle separators
border-focus: #00D4AA	– Input focus ring (same as light)

Status: (same hues, adjusted for dark)

success: #00D4AA
success-bg: rgba(0, 212, 170, 0.12)
warning: #FBBF24
warning-bg: rgba(251, 191, 36, 0.12)
error: #F87171
error-bg: rgba(248, 113, 113, 0.12)
info: #818CF8
info-bg: rgba(129, 140, 248, 0.12)

Gradients (use sparingly — only for hero sections and premium elements)

Gradient Primary:	linear-gradient(135deg, #0A2540 0%, #1A3A5C 100%)	– Nav bars, hero
Gradient Accent:	linear-gradient(135deg, #00D4AA 0%, #00B894 100%)	– Primary CTAs
Gradient Royal:	linear-gradient(135deg, #635BFF 0%, #8B5CF6 100%)	– Premium badges
Gradient Mesh:	radial-gradient(at 20% 80%, #00D4AA15, transparent), radial-gradient(at 80% 20%, #635BFF10, transparent)	– Subtle bg decoration

TYPOGRAPHY

Font Family

Primary:	"Inter"	– All UI text. Clean, modern, excellent readability. Available on Google Fonts. Built for screens.
Monospace:	"JetBrains Mono"	– Numbers, account numbers, amounts, codes. Makes financial data feel precise and technical.

Why Inter: Used by Linear, Vercel, Figma, and every top-tier product. It has tabular numbers (all digits same width — critical for financial data), clear letter spacing, and excellent rendering at every size.

Type Scale

Display:	48px / 56px leading / -0.02em tracking / Inter Bold → Hero headlines only. "Own Property From N100,000"
H1:	32px / 40px leading / -0.02em / Inter Bold → Page titles. "My Portfolio"
H2:	24px / 32px leading / -0.01em / Inter Semibold → Section headers. "Your Holdings"
H3:	20px / 28px leading / -0.01em / Inter Semibold → Card titles, sub-sections. "Gwarinpa Duplex"
H4:	16px / 24px leading / Inter Semibold → Labels, small headers. "Unit Price"
Body:	16px / 24px leading / Inter Regular → Main content text
Body Small:	14px / 20px leading / Inter Regular → Secondary text, descriptions
Caption:	12px / 16px leading / Inter Medium → Labels, timestamps, badges, helper text
Overline:	11px / 16px leading / Inter Semibold / UPPERCASE / 0.05em tracking → Category labels, section overlines. "RENTAL PROPERTY"
Money:	Any size / JetBrains Mono Medium → All currency amounts. "N2,450,000" → Always use Nigerian Naira format: N followed by number with commas

SPACING SYSTEM

Base unit: **4px**

xs:	4px	– Tight spacing (icon to text in a badge)
sm:	8px	– Between related items (label to input)
md:	12px	– Between elements in a group
lg:	16px	– Between groups, card padding (mobile)
xl:	20px	– Standard card padding
2xl:	24px	– Between sections
3xl:	32px	– Between major sections
4xl:	48px	– Page section gaps
5xl:	64px	– Hero section padding

Screen Padding

```
Mobile:    16px horizontal
Tablet:    24px horizontal
Desktop:    32px horizontal (max content width: 1280px, centered)
```

BORDER RADIUS

```
none:    0px      - Never used (everything has at least slight rounding)
sm:      6px      - Small elements: badges, chips, tags
md:      8px      - Inputs, small buttons
lg:      12px     - Cards, modals, dropdowns
xl:      16px     - Large cards, bottom sheets
2xl:     20px     - Image containers, hero cards
full:    9999px   - Pill buttons, avatars, circular elements
```

Rule: Larger elements get larger radius. A small badge = 6px. A full card = 12px. An avatar = full circle.

SHADOWS & ELEVATION

```
Level 0:  none
          → Flat elements, inline content

Level 1:  0 1px 2px rgba(10, 37, 64, 0.04),
          0 1px 3px rgba(10, 37, 64, 0.06)
          → Cards at rest, inputs

Level 2:  0 4px 6px rgba(10, 37, 64, 0.04),
          0 2px 4px rgba(10, 37, 64, 0.06)
          → Cards on hover, dropdowns

Level 3:  0 10px 15px rgba(10, 37, 64, 0.06),
          0 4px 6px rgba(10, 37, 64, 0.04)
          → Modals, bottom sheets, floating elements

Level 4:  0 20px 25px rgba(10, 37, 64, 0.08),
          0 8px 10px rgba(10, 37, 64, 0.04)
          → Toast notifications, popovers

Dark mode: Replace rgba(10, 37, 64, X) with rgba(0, 0, 0, X*2)
           Add subtle glow: 0 0 0 1px rgba(0, 212, 170, 0.05) on elevated cards
```

COMPONENT LIBRARY

Buttons

Cards

Inputs

Bottom Navigation (Investor App — Mobile)

Icons: Lucide React Native (consistent, clean line icons)
Tap: spring animation (scale 0.85 → 1.0, 300ms spring)

Property Type Badges

Rental: bg: #ECFDF5, text: #047857, border: #A7F3D0
Build&Sell: bg: #EEF2FF, text: #4338CA, border: #C7D2FE
Land: bg: #FFF7ED, text: #C2410C, border: #FED7AA

Size: px: 10px, py: 4px, font: 11px Inter Semibold, UPPERCASE
Radius: 6px

Progress Bar

Track: bg-tertiary, height: 6px, radius: full
Fill: accent gradient (left to right), radius: full

Animation: width animates on mount (0% → actual, 800ms ease-out)

Milestones (optional): small dots at 25%, 50%, 75%
Nearly full (>90%): fill pulses subtly (glow animation)

Toast / Snackbar Notifications

SUCCESS

bg: #0A2540, text: white, left accent: 3px success

ERROR

bg: #0A2540, text: white, left accent: 3px error

Position: top of screen (mobile), top-right (web)
Animation: slide down + fade in, auto-dismiss 4s
Radius: 12px, shadow: Level 4
Swipe to dismiss (mobile)

Modal / Bottom Sheet (Mobile)

Background overlay: rgba(10, 37, 64, 0.5), blur(4px)
Sheet: bg-primary, radius: 20px top corners
Animation: slide up with spring physics
Drag to dismiss with velocity detection

SCREEN LAYOUTS

Investor App — Home Dashboard

Investor App — Property Detail

Investor App — Investment Success

Admin Portal — Dashboard (Desktop)

Sidebar: bg-primary (#0A2540), width: 240px, fixed

Content: bg-secondary, scrollable

Stat cards: bg-elevated, shadow Level 1

Active nav item: accent bg with 12% opacity, accent text, left 3px accent border

Product Website — Hero Section

ANIMATIONS & MICRO-INTERACTIONS

Principles

- Every animation has a purpose (feedback, direction, delight)
- Duration: 150-300ms for UI feedback, 400-600ms for transitions, 800ms+ for celebratory
- Easing: `cubic-bezier(0.4, 0, 0.2, 1)` for most, spring physics for playful elements
- Never block the user — they should always be able to interact during animations

Specific Animations

SCREEN TRANSITIONS (React Navigation)

Push: slide from right, 300ms
Modal: slide from bottom, 350ms spring
Tab switch: cross-fade, 200ms

BUTTON PRESS

Scale: 1.0 → 0.97 → 1.0 (spring, 200ms)
Haptic: light impact on press (iOS), light vibration (Android)

PULL TO REFRESH

Custom: PropVest logo spins while loading
Spring back when released

INVESTMENT SUCCESS

1. Circle draws in (stroke animation, 600ms)
2. Checkmark draws inside circle (300ms, delayed 400ms)
3. Confetti burst from center (800ms, 40 particles)
4. Text fades up (300ms, delayed 800ms)
5. Cards slide up one by one (200ms each, staggered 100ms)

NUMBER COUNTING

Portfolio value, payout amounts: count up animation
N0 → N2,450,000 over 800ms, ease-out
Use JetBrains Mono so digits don't shift width

PROGRESS BAR FILL

On mount: 0% → actual% over 800ms, ease-out
Color shifts from accent to accent-bright as it fills

SKELETON LOADING

Shimmer effect: gradient sweep left-to-right, 1.5s loop
bg-tertiary base with lighter sweep
Shapes match actual content layout

CARD HOVER (Web only)

translateY: 0 → -2px, 200ms ease
Shadow: Level 1 → Level 2
Subtle border color shift to accent at 20% opacity

NOTIFICATION BADGE

Number appears with scale spring (0 → 1.2 → 1.0)
Red dot pulses gently when new (opacity 0.7 → 1.0 loop)

LIST ITEMS

Staggered fade-up on mount: each item delayed 50ms
Swipe to delete: item slides right, height collapses

TAB INDICATOR

Slides smoothly between tabs (spring physics, 300ms)
Active tab text: color transition 200ms

ICONOGRAPHY

Library: Lucide Icons (React Native + Web)

- Consistent 24x24 base size
- Stroke width: 1.75px (slightly thinner than default for elegance)
- Corner radius: round caps and joins
- Colors follow text color hierarchy

Key icons:

Home:	Home (house)
Explore:	Search (magnifying glass)
Portfolio:	Briefcase
Payouts:	Wallet
Profile:	User
Invest:	TrendingUp
Sell:	ArrowRightLeft
Notify:	Bell
Settings:	Settings (gear)
Property:	Building2
Developer:	UserCheck
Admin:	Shield
Success:	CheckCircle2
Error:	XCircle
Warning:	AlertTriangle
Info:	Info
Share:	Share2
Heart:	Heart (wishlist)
Filter:	SlidersHorizontal
Sort:	ArrowUpDown

RESPONSIVE BREAKPOINTS

Mobile:	0 - 767px	Single column, bottom nav, full-width cards
Tablet:	768px - 1023px	Two columns, sidebar nav (collapsible)
Desktop:	1024px - 1439px	Three columns, persistent sidebar
Large:	1440px+	Max content width 1280px, centered

Investor App (Expo Web)

- Designed mobile-first
- Web version mirrors mobile layout up to 767px
- Above 768px: adds sidebar, multi-column property grid

Admin & Developer Portals

- Desktop-first (admins use computers)
- Sidebar always visible on desktop
- Hamburger menu on mobile/tablet
- Tables become card lists on mobile

Product Website

- Responsive with all breakpoints
 - Hero section adjusts: text + image side-by-side (desktop) → stacked (mobile)
 - Navigation: horizontal (desktop) → hamburger (mobile)
-

DARK MODE IMPLEMENTATION

Rules

1. Never use pure black (#000000) as background — use #0A0E14 (warmer)
2. Reduce white text to #F9FAFB (not pure white — less eye strain)
3. Shadows become subtle glows in dark mode
4. Images get a subtle dark overlay (5%) to blend with dark UI
5. Charts/graphs use slightly brighter accent colors for visibility
6. Status colors stay the same hue but adjust brightness
7. Cards get 1px border (border-default) instead of relying on shadow

Detection

- Default: follow system preference
 - User can override in settings (Light / Dark / System)
 - Persist choice in AsyncStorage (mobile) / localStorage (web)
-

PLATFORM-SPECIFIC GUIDELINES

iOS (via Expo)

- Use SF Pro for system text where Inter is not loaded

- Respect safe areas (notch, home indicator)
- Use native haptic feedback patterns
- Bottom sheet uses iOS-style handle
- Blur effect on nav bar (UIBlurEffect style)

Android (via Expo)

- Material You dynamic color support (optional, Phase 2)
- Edge-to-edge display with transparent status bar
- Ripple effect on touch (default React Native behavior)
- Bottom nav follows Material 3 guidelines

Web (Next.js portals + Expo Web)

- Focus indicators visible for keyboard navigation (accessibility)
- Hover states on all interactive elements
- Cursor: pointer on clickable elements
- Smooth scroll behavior
- Tooltip on hover for icon-only buttons

ACCESSIBILITY

Contrast: All text meets WCAG AA (4.5:1 for body, 3:1 for large text)
 Touch: Minimum tap target 44x44px (iOS) / 48x48dp (Android)
 Font: Supports system font scaling (up to 200%)
 Screen reader: All images have alt text, all buttons have labels
 Motion: Respect "Reduce Motion" system setting – disable animations
 Color: Never use color ALONE to convey meaning (always pair with icon/text)

BRAND ASSETS

Logo

Full:	"PropVest" wordmark Font: Inter Bold, tracking: -0.02em The "V" has a subtle upward arrow incorporated (growth) Primary color on light bg, white on dark bg
Icon:	"PV" monogram in a rounded square bg: gradient (midnight → accent) text: white Used for app icon, favicon, small spaces
App Icon:	1024x1024 base Rounded square (iOS auto-masks, Android adaptive icon) Gradient background, white PV monogram No text below – icon only

App Store Assets

Screenshots:	6.7" (iPhone 15 Pro Max), 6.1" (iPhone 15) Show real app screens with device frame Top text overlay: feature callout (Inter Bold, 24px) 5 screenshots: Home, Property, Invest, Portfolio, Payouts
Feature graphic (Play Store):	1024x500 Gradient bg, phone mockup, "Own Property From N100,000"

SUMMARY: WHAT MAKES IT WORLD-CLASS

1. **Color palette is intentional** — midnight navy for trust, emerald for growth, purple for premium. Not random.
 2. **Typography is precise** — Inter for readability, JetBrains Mono for money. Tabular numbers so columns align.
 3. **Spacing is mathematical** — 4px base grid. Everything aligns. Nothing is "eyeballed."
 4. **Animations have purpose** — button press = feedback, confetti = celebration, shimmer = loading. No animation without reason.
 5. **Dark mode is designed, not inverted** — warm near-black, reduced contrast, subtle glows. Not just "swap white for black."
 6. **Components are consistent** — every card, every button, every input follows the same rules everywhere. No one-offs.
 7. **Whitespace is intentional** — less clutter = more trust. If a screen feels empty, that's good. Let the content breathe.
 8. **Money always looks precise** — monospace font, proper formatting (N2,450,000), right-aligned numbers.
 9. **Motion is subtle** — springs not linear, 200-300ms not 500ms, always interruptible. Fast but smooth.
 10. **Accessibility is built in** — not an afterthought. Contrast ratios, touch targets, screen reader support from day one.
-
